</tr>
</thead>
<tbody>
<tr>
<td><strong>Mast-a-Fab® 42-24</strong></td>
<td>A white leno weave, synthetic fiber reinforcing membrane with 9” x 8” mesh size. Easy to handle yet superior to glass mesh because of its elastic properties.</td>
</tr>
<tr>
<td><strong>Chil-Glas # 10</strong></td>
<td>A 10’ x 10’ glass mesh. Used to reinforce mastic, coatings and sealants.</td>
</tr>
</tbody>
</table>

This guide is provided as a quick reference. Please see product data sheet for specific test methods, installation methods and additional information.

1. Always choose white colored coating for exterior use on polystyrene insulation. Do not use solvent based products with polystyrene.
**General Notes**

1. The recommendations in this selection guide are of general nature only. Refer to the product data sheets to be certain the selected Childers® product meets all the requirements of the application.

2. Do not apply exterior weather barrier coating on horizontal surfaces that might be subject to prolonged ponding of water.

3. If insulation cement is used, it must be completely dry before applying Childers® mastics or coatings. Prime as required.

4. Because of the variation in surface characteristics of facing materials, we recommend that the user conduct their own adhesion test when choosing a coating or mastic for foil, kraft and plastic-faced insulations.

5. The Childers® products listed in this guide are for professional use only.
