**FOSTER® JAC-TAC® ADHESIVE AND EDGE SEALER**

**Foster® JAC-TAC® Adhesive** is a black, rapid-setting, resin/polymer emulsion adhesive for use with low density fibrous glass insulation, duct wrap and acoustical linings (up to 3 lbs./c.f.) in air handling systems. It has good wet grab and can be applied to painted or unpainted steel, galvanized steel or aluminum surfaces.

**JAC-TAC® Adhesive** is formulated for use in duct liner machines, both air atomized spray and roll coater types. It has excellent hot peel strength and high humidity resistance. Once dry and cured, it has outstanding water resistance.

**JAC-TAC® Adhesive** is water-based and non-flammable in the wet state. It meets the requirements of ASTM C916-85, Type II (ASC-A-7001, Type II).

**JAC-TAC® Adhesive** is also used to seal or butter cut edges of duct liner insulation to retard fiber release. It can be applied to edges by brush or spray and its black color matches the original facing surface.

**JAC-TAC® Adhesive** meets NFPA 90A & 90B 25/50 requirements.

**JAC-TAC® Adhesive 85-62™** meets the requirements of:
- MAS Certified Green®
- California Dept. of Public Health Standard Method v1.2
- VOC Emissions and Content requirements to contribute to LEED v4 EQ Credit: Low Emitting Materials – Paints and Coatings
- Collaborative for High Performance Schools EQ 7.1

VOC Content: 6 g/l, less water and exempt solvents.

**LIMITATIONS**

Store and apply between 40°F (4°C) and 100°F (38°C), protect from freezing until dry.

Always test plastic foam insulation for warpage when using any water-based adhesive.

Not suggested for sealing vapor barrier jackets.

Overhead applications may require mechanical fasteners.

FOR
FOSTER® JAC-TAC® ADHESIVE
85-62™

MATERIAL PREPARATION
Stir well. DO NOT THIN. Apply only to clean, dry, oil-free surfaces. Keep container closed when not in use.

APPLICATION

Spray:
Apply the Foster® JAC-TAC® adhesive to the metal surface uniformly at 300 – 500 sq. ft./gal. (7.4 – 12.3 m²/l). While still wet, press the insulation into place, making sure that complete contact is made with applied adhesive.

Average viscosity range: 1,000 – 2,000 cps. Before using for the first time, existing spray systems must be completely cleaned and free of the old adhesive and solvents. Corrosion resistant pumps and fittings are suggested.
